

SanGIS
We Have San Diego Covered
The County of San Diego's Geographic Information System (GIS) is a critical tool for the County's planning and decision-making process. It provides a central repository for spatial data and a platform for analyzing and visualizing that data. The GIS is used by various departments within the County, including Planning, Public Works, and the Office of Strategic Management. The GIS is also used by the public to access information about the County and its services.
